

### Technology Features

- » Web-based - Cloud-First compliant
- » Hosted on-premises or remotely
- » Intuitive Point-and-Click configuration
- » Continuously re-configurable to accommodate evolving needs
- » Customizable to your organization's look and your staff's comfort level
- » Attach, store, and search documents
- » Role-based security and access model
- » Platform independent
- » Supports Single Sign-On and Multiple Authentication
- » Secure with C&A based on NIST800-53, DIACAP and DCID 6/3

## Streamlined Tracking Magnified Workflow Management

MicroPact's entellitrak is a data tracking and management platform that can be implemented immediately and configured continuously to model your workflow and business processes without requiring additional programming. Why is that important? Because in a fiscal environment where there's no room for waste, it enables you to get to work quickly and cost-effectively.

Whether it's based on-premises or in the cloud, entellitrak's streamlined approach scales from the local office to the enterprise, giving everyone in your organization the ability to accurately capture, track and report on the data that drives operations forward.

### Follow the Data

Efficient operations stem from accelerated access to critical data. An entellitrak system can be configured in a fraction of the time and cost required for custom software development or traditional BPM (Business Process Management) implementations. Additionally, data migration is simple and quick as entellitrak works with nearly every backend data repository technology.

Looking for power and agility? entellitrak can replace everything from simple spreadsheets, to extensive SharePoint or Lotus Notes & Domino applications, all the way up through enterprise-level BPM solutions. Case processing, data modeling, audit reporting — the configuration possibilities are virtually limitless.

### Keep Things Moving Forward

entellitrak delivers the information required for effective workflow management and collaboration. Because access is role-based, users see only the data that is pertinent to their domain, enabling them to quickly focus on relevant information and tasks. Roles also deliver the added benefit of filtering out sensitive and protected information. Automatically generated ticklers and email notifications ensure everyone's aware of what's coming next, built-in and customizable dashboards give users quick access to the information that is most useful to them, and reports custom to your operations come pre-loaded. entellitrak also comes with a powerful reporting engine and ad-hoc report writer, capable of generating virtually any report necessary.

### FREE Prototype Offer

The best way to understand entellitrak is with a prototype.

Contact us for a presentation and demonstration.

703.709.6110  
sales@micropact.com

Once we have confirmed that entellitrak is an appropriate solution, we can build a custom prototype based on a process of your choosing.

MICROPACT®

## Integrated Tools & Modules

As a fully integrated data tracking and management system, entellitrak eliminates the need to integrate 3rd party applications through a comprehensive set of available modules and built-in tools.

- » Workflow and process modeling
- » entellidoc™ document management module
- » Security and permissions management system
- » Customizable help module
- » Reporting engine
- » Advanced search engine
- » Forms management system
- » Content management system

## Cloud-First Compatible

entellitrak is available under the following NIST-defined<sup>1</sup> Cloud Computing Service and Deployment models:

- » Cloud Software as a Service (SaaS)
- » Cloud Platform as a Service (PaaS)
- » Private cloud
- » Community cloud
- » Public cloud
- » Hybrid cloud

## Experience the Business Benefits

entellitrak makes great business sense. It's what we call "Configurable COTS" — commercial off the shelf software (i.e. affordable) tailored to your data and workflow. Because it's web-based, all users are always on the same software version and benefit immediately from all product software updates and hosting capacity upgrades. If your operations change, you can change the way entellitrak works. Simple Point-and-Click configuration capabilities make it possible to create or amend workflows, forms, layouts, dashboards — pretty much anything; entellitrak automatically generates the corresponding input forms, information views, and database artifacts behind the scenes. Lastly, there are several license alternatives for acquiring entellitrak. Standard alternatives include Concurrent seat, Named seat, and Enterprise Edition.

## Embrace Transparent Technology

Good things come in threes, like our wide-open architecture; it's comprised of a user interface, application layer, and database layer. Unlike any competitive product we know of, entellitrak's relational database layer is fully exposed as is the definition of every configurable component. It's simple, elegant, and gives developers the ability to easily access and manipulate each and every element. Our open architecture approach also makes it possible for entellitrak to be staged from any platform and to communicate with virtually any external system. Lastly, to ensure that you are never locked in to MicroPact services, we offer training to outside programmers so that they can accelerate their understanding of entellitrak's Java-based system.

## Sign-On to Security

Advanced security policies are built in. At the user level, entellitrak employs a role-based security and access model that mimics your organization's structure. Permissions are completely configurable through a user interface CRUD (Create/Read/Update/Delete) facility. entellitrak also utilizes SSL encryption of all data.

entellitrak supports:

- Single Sign-On (LDAP, Active Directory, RSA Tokens, Authentication Portals, Smart Cards, CAC Cards).
- Multiple Authentication (can support multiples of these at one time: LDAP, Active Directory, RSA Tokens, Authentication Portals, Smart Cards, CAC Cards).

## Focus On Federal

For more than a decade, MicroPact has focused on engineering web-based COTS solutions for the US Government. Today MicroPact serves over 140 Federal organizations and agencies and has been recognized as one of the fastest growing companies in both the region and nation, by Inc. 500, Deloitte & Touche, and Washington Technology.
